

Principal or Senior Consultant (Carbon)

Location:

Bristol, London or Manchester. Please specify any preference on your application form. Hybrid working arrangements are available.

Hours of Work:

Full time, 40 hours per week. Contractual hours can be worked flexibly over 5 days, within Eunomia's Office Hours, Monday – Friday, 06:00-20:00. Employees are expected to be available to attend meetings during core office hours 09:00-17:00.

Start Date:

As soon as possible. Please indicate your earliest possible start date on the application form.

About the Company:

Eunomia Research & Consulting is an independent and ethical environmental consultancy. We are a mission-oriented business and our goal is to be influential in bringing about positive change: we embrace this in all that we do. We employ around 150 staff and have offices in Bristol, London, Manchester, Brussels, Athens, New York and Auckland.

We are at the leading edge of a number of areas of environmental policy which are critical in the eyes of governments. We have a wide client base, covering national and local government as well as the private and NGO sectors. Your work may range from studies for large corporates through to local government. We undertake an exceptional breadth of project work, ranging from substantial re-design of the food production system in Wales to bring it closer to achieving net zero, to development of a financial and implementation model to decarbonise all UK neighbourhoods at no cost to residents, to a critique of whether achieving net zero is enough for the four largest materials production sectors to keep global warming within 1.5 degrees C.

Working with Eunomia will give you the opportunity to undertake innovative work with influential clients, and to question conventional wisdom where this stands in the way of environmental improvement.

In your work with Eunomia, you will benefit from our approach which seeks to marry up an understanding of practical implementation, the latest academic thinking and the leading edge of emerging policy.

Job Description

You will be involved in a range of activities including technical leadership, bid management, client relationship management, and line management. You will play a key role in helping us expand the range and volume of work we deliver in the decarbonisation field, and in training up more junior staff.

You will work alongside colleagues to design and deliver projects that meet clients' needs. You will be involved in or lead multiple projects at once. These may involve supporting local authorities in developing carbon baselines and decarbonisation plans, working with businesses to reduce their carbon footprint, or supporting national or supranational

governmental bodies to develop emissions reduction policies. The content of the work may involve developing excel-based models, desktop research, and technical report writing, all informed by a practical understanding of what is possible for different clients to achieve.

You will be flexible, with a strong work ethic. You will be comfortable simultaneously leading and delivering a number of technical projects and bids, in line with deadlines and budgets. You will be highly organised, and share our commitment to a high quality of work, as well as being able to demonstrate a personal commitment to tackling environmental and sustainability issues.

Essential Criteria

- Good technical understanding of how to develop emissions mitigation calculations including at least one of the following:
 - Net zero policy design
 - Materials decarbonisation and embedded carbon
 - The natural environment and the bioeconomy
- Strong numerical capabilities and technical know-how, with the ability to build emissions mitigation models, as well as the ability to critically analyse such models;
- A track record of successful work winning (whether through bid writing or relationship management) with a focus on national and local government, or in policy advocacy – or with equivalent experience from procuring consultancy support;
- Substantial experience in roles that have involved carbon analysis, modelling and policy design.
- Strong verbal and written communication skills, including bid and technical report writing.

Desirable Criteria

- An excellent network within the decarbonisation field;
- Experience working within the consultancy business model;
- Experience leading or managing a small team or department;
- Experience of training and supporting the development of colleagues in technical issues relating to decarbonisation.

Remuneration

Dependent on experience

London based: Staff will receive an additional £3,000 in accordance with Eunomia's London Weighting Allowance policy.

Benefits

- Private healthcare;
- Employee assistance programme;
- Group pension;
- Death in service scheme; and
- Income protection scheme (after completion of probationary period)

Holiday Entitlement

24 days per year (plus Bank Holidays) rising by 1 day each year to a maximum of 30 days per year.

Application Information
